17' CLASSIC - INSTALLATION INSTRUCTIONS

DO NOT Install near overhead power lines or Fly Flags in wind OVER 20 mph

Step 1: Please remove all parts from boxes & separate pieces. Materials for final install in the ground vs hard surface may vary - please reference **Step 3** for either hard surface or ground install instructions.

You will need:

- Stackable Poles
- Bungee Cord
- Flag

Step 2: Assemble poles by placing smaller end into larger end - please see picture below.

Note: This is a stackable pole, NOT a telescoping pole!

Step 3: Are you installing on a Hard Surface or in the Ground? Please reference the correct information below based on your specific flag materials.

Landscape Installation

You will need:

- Ground Stake
- Rubber Mallet (Not Included)

Pound ground stake with metal washer into grass or dirt with the rubber mallet, 24" deep. Make sure that the stake is straight and not at an angle.

Hard Surface Installation

You will need:

- Base Plate / Metal Rod
- 2 Sandbags (each filled with 30 lbs of sand or pea gravel - not included).

Screw metal rod into base plates. Fill the sandbags and place them on top of the plate for added stability.

Step 4: Slide pole into sleeve on the flag and hold firmly. Hook bungee cord to the tab at the end of the flag sleeve and attach the bungee to the clip on the bottom section of the pole.

Note: Be certain the tip of the pole is fully inserted into the strengthened TOP END of the flag pole sleeve.

Bungee Cord Attachment

Step 5: FINAL STEP See Below for specific instructions on final step for either a Landscape or Hard Surface Install.

Ground Installation

Place pole over the top of the whiterod.

Hard Surface Installation

Place the bottom end of the pole on the metal rod at the center of the base.
